

# Managing Initiatives vs. Creating Systems Change

Leading Implementation for Systems Change

December 3<sup>rd</sup> and 4<sup>th</sup>, 2008

Albuquerque, NM

A decorative graphic consisting of several sets of concentric circles, resembling ripples in water, is positioned in the bottom right corner of the slide. The circles are light blue and vary in size, with the largest set being the most prominent.

# Leadership: to what ends?

- Requirements
- Agreements with partners
- Programs you proposed in logic model
- Local and National Evaluation data

# Management level

- Carry out the activities
- Collect process and outcome measures, including GPRA
- Conduct CMT/partnership meetings
- Report to the Federal Project Officer
- Serve kids and families
- Train staff in evidence based interventions and practices

# Management outcomes

- School building security improved
- Kids participate in ATOD prevention curricula
- Kids and families receive mental health services
- Kids in afterschool programs experience positive behavioral rewards
- Kids in preschool learn social skills

# Those outcomes over time....

- Things break in the school buildings
  - Teachers drop some of the prevention lessons; new teachers don't implement
  - Mental health staff go back to their clinics
  - After school staff turn over and return to negative discipline
  - Preschool staff turn over and stop teaching social skills
- 

# Consultant-itis

- Outcomes: while the consultant is there
- After the consultant leaves
- Over time????

# What if.....

- Understand business objectives
- How does it operate now?
- How does the change the consultant has in mind align with these objectives?
- Who needs to be involved in making the changes?
- What best practices might apply?

# To lead systems change...

- Knowledge of the system, it's culture, priorities, and ways of operating and regulating itself
- Data about concerns
- An alliance with levels of leadership within the system
- Effective ways of introducing change that develops ownership and leadership
- Vision about the outcomes
- Use a data-based decision making process

# “Systems change” outcome

- Leadership engages staff and addresses their concerns
- Best practices of skills training: evidence based; supported by practice and coaching; training institutionalized
- Develop and institute policy
- Create feedback loop about changes to continue evidence based decision making

# Improved school building security

- Shared objectives about security
- What do they need from each other to reach those objectives?
- What best practices do they each want to see in place?
- What are the tasks they need to complete to implement those best practices?
- What policies/MOAs/agreements are needed to ensure that building safety is maintained?

## Kids and families receive mental health services

- Kids more able to learn
- Schools need brief counseling models that don't interrupt learning; counselors need appropriate referrals and dependable access to kids; juvenile justice and law enforcement need to be able to share information and connect with services for kids in their systems
- What best practices can be used?
- Tasks: release forms and info sharing; services implemented; data collection for decision making
- What policies/MOAs needed to continue

# Table discussions

- Where can you see the distinction between management and leading for systems change in your initiative?
  - What would it take to extend implementation to achieve systems change?
  - Is the project aligned more closely with some systems than others?
-
